SUMMARY

Data analyst and analytics engineer with 5+ years turning complex data into decisions across banking, healthcare, and retail, with hands-on full-stack and applied-AI development. Expert in **SQL** and **Python** with ETL pipelines, data modeling, and BI dashboards in **Tableau**, **Power BI**, and **Looker**, backed by statistics and machine learning (forecasting, A/B testing, anomaly detection) on **AWS** and **Azure**. Also ships production web apps in **React**, **TypeScript**, and **FastAPI** with **LLM** and agentic-AI systems, and judges every project by whether it changed what someone did: sharper fraud detection, faster reporting, and forecasts accurate enough to reshape planning.

SKILLS

Programming & Analysis: Python (Pandas, NumPy), SQL, R, Excel (Advanced), Statistics, Hypothesis Testing, A/B Testing, Forecasting

Visualization & BI: Tableau, Power BI, Looker, Matplotlib, Seaborn, KPI Dashboards, Data Storytelling, Ad-hoc Reporting

Data Engineering: ETL Pipelines, dbt, DuckDB, Azure Data Factory, Dimensional/Medallion Modeling, Data-Quality Testing, Reconciliation, Data Lineage, Data Warehousing

Cloud & Databases: AWS (S3, Redshift, Athena, Glue), Azure, Google BigQuery, PySpark, Hadoop (Hive), PostgreSQL, MySQL, SQL Server, Oracle

Software & AI: React, TypeScript, Next.js, Node.js, FastAPI, REST APIs, OAuth 2.0, LLM/Agentic AI, RAG, Git, CI/CD, Automated Testing, Vercel

Fraud & Risk: Anomaly Detection, Rule-Based Models, Transaction Monitoring, Threshold Tuning, Data Validation, Reporting & Alerting

EXPERIENCE

Senior Data Analyst | JP Morgan Chase | New Jersey, USA

Mar 2026 - Present

- Rebuilt rule-based fraud-detection models in **Python** and **SQL**, improving detection accuracy **28%** through iterative back-testing and threshold tuning that cleared the false positives draining investigator hours across enterprise transaction monitoring.
- Deployed scalable **AWS**-based detection pipelines across multiple banking channels, cutting fraud-related financial exposure **15%** by surfacing suspicious activity earlier and stopping losses before they could accumulate across the business.
- Automated and standardized transaction-monitoring workflows, reducing manual investigation effort **22%** and delivering a single, reliable real-time view that risk and compliance teams could act on with confidence.
- Engineered systematic data cleansing, validation, and transformation on **AWS** (S3, Redshift, Athena, Glue), raising reporting reliability across dozens of financial source tables so downstream models and dashboards ran on trustworthy data.

Full Stack Developer | Astoria AI | Remote

Sep 2025 - Feb 2026

- Architected full-stack AI-agent applications from the ground up, designing responsive **React** and **TypeScript** frontends and integrating **LLM**-based agentic systems that enabled real-time agent interaction and monitoring across the product.
- Implemented **OAuth 2.0** authentication securing API endpoints and user access, establishing enterprise-grade security foundations the team could build on toward its first production launch.
- Designed **Python**-based data pipelines supporting AI model training, evaluation, and the data infrastructure that agentic workflows and overall system scalability depended on as usage grew.
- Ran comprehensive manual API testing and QA across the full stack, identifying critical bugs and edge cases early to ensure the AI-agent systems were reliable and production-ready before release.

Data Analyst Intern | JPMorgan Chase | Remote

May 2024 - Aug 2024

- Analyzed slow-running **SQL** queries with execution plans, pinpointing full table scans, inefficient joins, and missing predicates as the primary bottlenecks slowing production reporting workflows.
- Rewrote query logic and designed composite and covering indexes on high-traffic tables, reducing query cost and cutting dashboard load times so downstream business users got their results faster.
- Built **Tableau** dashboards to stakeholder requirements, enabling self-service access to insights that previously required a manual SQL pull from the reporting team every single time.

Data Analyst I | Capgemini | India

Jan 2022 - Jul 2023

- Automated recurring healthcare reporting in **Power BI** Server, cutting manual effort **28%** and improving delivery consistency so clinical and operations stakeholders could trust the numbers without re-checking.
- Engineered **ETL** pipelines in **Azure Data Factory**, consolidating fragmented source systems into clean, analytics-ready healthcare datasets the wider enterprise relied on for its everyday reporting and decisions.
- Segmented patients and modeled high-risk cohorts in **Python** under strict **PHI** governance, directing limited care resources toward the priority groups that needed intervention first rather than spreading effort thin.

Junior Data Analyst I | Accenture | India

Aug 2019 - Dec 2021

- Built **Python** (Pandas, NumPy) time-series models that lifted demand-forecast precision **18%**, giving retail planners far more reliable inputs for their inventory and replenishment decisions.
- Developed **Power BI** KPI dashboards tracking inventory turnover and replenishment cycles, speeding stakeholder decisions **25%** by putting the key operational metrics in one clear, shared view.
- Reduced excess inventory **12%** through controlled A/B testing and hypothesis validation on replenishment strategies, trimming carrying costs without risking stockouts on the shelf.

PROJECTS

COURTSIDE - End-to-End NBA Analytics Platform

2025 [Live](#) | [Code](#)

- Modeled **13.5M** NBA play-by-play events across 77 seasons into advanced metrics and league-wide player percentiles, building 16 raw sources into tested **dbt** and **DuckDB** data marts with automated data-quality checks.
- Shipped a 6-page interactive **React** and **TypeScript** dashboard end to end, carrying the pipeline from raw events to a production, decision-ready product a front office could explore without waiting on an analyst.

Soccer PepStats - End-to-End Football Analytics Platform

2025 [Live](#) | [Code](#)

- Processed **1.3M** StatsBomb events into xG, shot maps, and player-season views served through a tested read-only **FastAPI** service behind a 12-tab dashboard a coaching staff could explore to answer tactical questions.
- Architected a Lambda-architecture pipeline in **DuckDB** with a near-real-time speed layer, gated by **60+** automated tests and GitHub Actions **CI/CD** to keep analytics fast and trustworthy under live-match load.

Self-Prep - AI-Powered Mock Interview Platform

2025 [Code](#)

- Built a full-stack AI interview platform in **Next.js**, **React**, and **TypeScript** with Firebase auth, integrating voice conversational agents (**Vapi**) for dynamic question generation and real-time spoken feedback.
- Designed the end-to-end flow from frontend through backend APIs to the AI integration, shipping a complete, working product solo from the first line of code through to a deployed, usable platform.

GradEase - Graduation E-Commerce Platform (Pace Capstone)

2025 [Code](#)

- Built a full-stack **MERN** store paired with a Voiceflow **AI chatbot**, delivering personalized product recommendations, guided browsing, and real-time order tracking to students across the full checkout flow.
- Owned the stack end to end, from the React storefront and Node/Express APIs through the MongoDB data layer, shipping a working capstone product students could actually browse, search, and buy through.

EDUCATION

Master of Science in Computer Science - GPA: 3.5/4.0

Sep 2023 - May 2025

Pace University, New York, USA

Bachelor of Science in Computer Science - GPA: 3.4/4.0

2018 - Aug 2021

Savitribai Phule University, Pune, India

ACHIEVEMENTS & CERTIFICATIONS

Leadership: Robotics leadership across all three years of the Bachelor's, advancing from Technical Coordinator to Technical Head of events and then Head of the flagship robotics event. **Athletics:** State-level under-18 soccer player and inter-college competitor. **Certification:** INSPIRE Professional Readiness Program, Pace University (Nov 2024).
