

Aniket Kshirsagar

Data Analyst

New Jersey, USA | aniket.kshirsagar.work08@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst with 5+ years delivering data-driven insights across banking, healthcare, and retail. Skilled in SQL, Python, Tableau, Power BI, and cloud platforms (AWS, Azure), with depth in fraud and anomaly analysis, ETL development, and predictive modeling. Proven record of improving detection accuracy, cutting manual effort, and enabling real-time decisions through scalable analytics. Recently extended into building and deploying LLM-based AI agents. Strong focus on data quality, governance, and automation.

SKILLS

- Programming:** Python, R, SQL
- Data Analysis:** Pandas, NumPy, Excel (Advanced), Power Query
- Visualization and BI:** Power BI, Tableau, Looker, Matplotlib, Seaborn, KPI Dashboards, Data Storytelling
- Databases:** MySQL, PostgreSQL, SQL Server, Oracle
- Statistics:** Hypothesis Testing, Regression Analysis, A/B Testing, Forecasting
- Cloud and Big Data:** AWS (S3, Redshift, Athena, Glue), Azure, Google BigQuery, Apache Spark (PySpark), Hadoop (HDFS, Hive)
- ETL:** Data Wrangling, ETL Pipelines, Azure Data Factory, dbt
- Fraud Detection:** Ravelin, Anomaly Detection, Rule-Based Models
- Generative AI:** LLM-Based AI Agents (Build and Deploy), NLP
- Collaboration:** Git, GitHub, Jira, Confluence, Agile

WORK EXPERIENCE

Data Analyst, JP Morgan Chase <i>New Jersey, USA</i>	Sept 2024 to Present
- Analyzed large-scale financial transaction datasets using SQL to uncover suspicious activity patterns, supporting enterprise-level transaction monitoring across multiple banking channels. - Developed anomaly detection logic in Python by analyzing behavioral deviations, transaction frequency, and spending patterns to flag high-risk activities for fraud risk teams. - Improved fraud detection accuracy by 28% by optimizing rule-based detection models and reducing false positives through iterative testing and validation. - Built interactive Tableau dashboards to track fraud trends, alert volumes, and transaction anomalies, enabling real-time monitoring and faster stakeholder decisions. - Reduced manual investigation effort by 22% by automating transaction monitoring workflows and standardizing reporting processes. - Used AWS (S3, Redshift, Athena, Glue) for scalable data processing, collaborating with risk and compliance teams to deliver insights that reduced fraud-related exposure by 15%.	
Full Stack Developer, Astoria AI (Part-Time) <i>New York, USA (Remote)</i>	Sept 2025 to Feb 2026
- Built and deployed LLM-based AI agents, taking them from experimental prototypes to running, usable services. - Built a custom dashboard that unifies all agents in a single view, giving users one place to monitor and operate them. - Developed an automated candidate-recruiting pipeline that advances applicants through each stage, orchestrated by a scheduler for hands-off execution. - Implemented OAuth 2.0 authentication securing API endpoints and user access.	
Data Analyst, Capgemini <i>India</i>	Jan 2022 to July 2023

- Automated recurring healthcare reporting workflows through Power BI Server, cutting manual effort by nearly 28% and improving delivery consistency across stakeholders.
- Engineered and optimized ETL pipelines using Azure Data Factory to consolidate disparate healthcare data sources into reliable, analytics-ready datasets.
- Built dynamic Tableau dashboards to visualize patient engagement metrics and clinical performance, enabling clearer stakeholder decisions.
- Executed patient segmentation and cohort modeling with Python (Pandas, NumPy), driving more precise interventions for high-risk populations.
- Applied data governance and validation frameworks to ensure accuracy, compliance, and consistency across reporting systems handling sensitive PHI.

Data Analyst, Accenture

Aug 2019 to Dec 2021

India

- Engineered demand forecasting models using Python (Pandas, NumPy) and time-series methods, increasing prediction precision by 18% and improving inventory planning.
- Examined historical sales datasets through SQL and MySQL queries, surfacing seasonal patterns and demand signals, reducing stockout occurrences by 15%.
- Constructed scalable ETL pipelines using AWS Glue to ingest and transform large retail data from S3 into Redshift, improving processing efficiency.
- Developed interactive KPI dashboards in Power BI presenting inventory turnover, demand variability, and replenishment metrics, boosting stakeholder decision speed by 25%.
- Executed controlled A/B testing and hypothesis validation on replenishment strategies, decreasing excess inventory levels by 12%.

PROJECTS

Soccer PepStats, End-to-End Football Analytics Platform

[Live](#) | [Code](#)

- Python, pandas, DuckDB, FastAPI, React/TypeScript
- Built a Lambda-architecture platform transforming ~1.3M raw StatsBomb events into a 12-tab interactive dashboard covering a full La Liga 2015/16 season (380 matches, 9,168 shots with xG, 546 player-seasons with league-wide percentiles) plus a live World Cup 2026 mode.
- Engineered a batch layer producing an immutable events master and 3 analytics marts, and a speed layer with a 45s TTL cache and last-good fallback for resilience.
- Gated every stage with 60+ automated tests (pytest, Vitest); Dockerized API on Render, frontend on Vercel, GitHub Actions CI on every push.

COURTSIDE, End-to-End NBA Analytics Platform

[Live](#) | [Code](#)

- Python, DuckDB, dbt, React/TypeScript
- Built a production data platform transforming 2.2 GB of raw basketball data (65K+ games, 13.5M play-by-play events, 77 years of history) into a 6-page interactive dashboard.
- Modeled 16 unified data sources into 9 analytics-ready marts using a medallion pattern: Python and DuckDB ingestion, dbt modular transformations, React 18 and TypeScript dashboard.
- Enforced data quality with automated tests on every transformation and deployed the full system to production.

GradEase, Graduation E-Commerce Platform (Pace University Capstone)

[Code](#)

- MERN stack, AI chatbot
- Built a full-stack MERN e-commerce platform simplifying graduation shopping with an AI-powered chatbot (Voiceflow) delivering personalized product recommendations and real-time order tracking.

EDUCATION

Master of Science in Computer Science, Pace University, New York, USA

May 2025

GPA 3.5/4

Bachelor of Science in Computer Science, Savitribai Phule University, Pune, India

Aug 2021

CERTIFICATIONS

- INSPIRE (International Student Professional Readiness Education) Program Certification, Pace University (Nov 2024)

ACHIEVEMENTS

- Held robotics leadership roles across all three years of the Bachelor's program: Technical Coordinator of the robotics team, then Technical Head of robotics events, then Head of the robotics event.
- State-level under-18 soccer player.
- Represented the college soccer team in inter-college tournaments, and played for the Computer department in the inter-department tournament, reaching the final.
